Mr. Jabez Gan,

Thank you very much for your advice. I could not get the update, instead I unchecked the "basic authentication" at the SMTP protocol and now I am receiving emails.

When can I get the final tested update? I hope there would not be an issue by unchecking the "basic authentication" as anyway I am not using the TLS encryption.

Thank you

Regards

Hari

Hi, Everyone!

I have implemented home folders thru FSRM in Windows server 2003 at our office and it is working fine. I have set the notification threshold at warning 85% and limit 100%, an email has to be generated to the administrator(myself) when ever an users reaches these limits, but I find a lot of users have crossed the warning limit but I dont get any

Re: No Email notification when using FSRM !!!

notification emails.

I believe I did configured the email setting accordingly at the 'Configure Options' as I received the test E-mail sent to my admin account. Kindly advice.

Thank you

Regards

Hari
