Hi,

I'm running a Server2K3SP1/XP Pro SP2 network with no external connection. I am getting Event id 50 errors – .....time service detected a time difference of greater than 128 milliseconds for more than 90 seconds.....time service is no longer synchronised... etc. I have to stop and restart the time service on the other servers every morning to re-sync them!

The PDC is set to NT5DS and parameters\Ntpserver is set to the PDC IP address. All other settings are the default.

Can anybody suggest a solution please?

Many thanks

Adrian
