When you view the logged events in Event Viewer (double-click them in the right-hand pane) in the upper right corner, third button down is a copy to clipboard, then you can paste in the body of a reply message.

Please do so for each of the different System Log events (that are a Type: 'Error' or 'Warning') since last boot so we can see all of the event detail.

| Windows 2003 SP1 additional domain controller. After updates the server  
was  
| not seeing the domain. It was removed and then re-added and now is back  
in  
| the domain. Since being added back the following services which should  
start  
| automatically will not start...not even manually;  
|  
| net logon  
| computer browser  
| distributed file system  
| server  
|  
| The server will not start due to dependencies on the other three. When  
they  
| are attempted to start manually I receive 1068 errors...group  
dependencies.  
| I have checked that they all run system local and that correct permissions  
on  
| system32 folder are applied.  
|

Re: Cannot start services

| Any ideas are appreciated....thanks in advance.
