Hello,

Thanks for posting.

Based on my research, my suggestions are:

1. Take a screen shot of the drive D&E at quota properties page to let

me

know the settings.

2. Remove the mapping drive to share folder on E and re-map it to check

the

results.

3. If the problem still occur, please take a screen shot of the error message to let me know the detail.

thanks.

I decided to enable quotas
on user home directories.
The home

directories

are

in a shared folder on drive
D: When the quota had been
set several

users

were already exceeding the
quota.

On the same server on a
different drive (E:) I have a
shared folder

which

is the general file storage for
our organisation. There are
NO quotas
configured on this drive.

However, the day after
configuring the qota on D:,
when users who

RE: Quota Problem

were

already exceeding their
quota on D: logged on, the
drive mapping to

the

shared folder in E: failed
with the warning "there is
not enough disk

space".

However, the drive mapping
to their home directory was
fine.

Why is this happening when
no quotas are set for drive
E: on the

server?

The server is Windows 2003
R1
