But what counters/objects do you select in Performance Monitor? I want to monitor the logs for specific events, but cannot find an object/counter that allows me to do this. All I find are threshold options, as in greater or less than x.

Hi !!!

You can use Performance Logs & Alerts to monitor on Remote server also. but it wont notify u by email. U can set the alert to send you a network message or run some specific program.

For sending a mail need to check on internet.

Regards,
K.S.Kang

Is it possible to do this with Performance Logs and Alerts?

<tfenner> wrote in message news:%23f7eABQBHHA.4808@xxxxxxxxxxxxxxxxxxxxxxxxxxxx

I want to configure my Windows 2003 server to email me if it registers an error in any event log. I know there are plenty of event log monitoring software packages available, but wish to do this using whatever builtin methods are available so I do not have to install more

Re: Event Log Monitoring

software on my
server. Is there a way to do this?

If not, please recommend your favorite utility for doing this.

Please

order your recommendations in the following manner:

Free-->Cheapest-->Cheap-->Not so cheap

Thanks for your help!
