Typical cpu usage is under 5%  
memory usage usually sits around 650-700MB out of 2GB  
network usage is around 0-1%  
the time that the server actually starts to crash is at a period when there is little to no use.  
The server is home to symantec AV corp edition 10.1.4 (i think) about 700 home folders and roaming and mandatory profiles. It also oes WSUS, and runs peachtree acct for 1 user.

From the task manager stats it does not seem to be overloaded

Is the server overloaded? This article may help.

<http://support.microsoft.com/default.aspx?scid=kb:en-us:317249>

I check the DHCP server setting over even though it returns with "The operation completed successfully"

I'd also get the network adapter configuration issue resolved.

This one may help with the 333 and or the 42 error.

Re: Event ID 2019 and Event ID 333

The following are evnets after the reboot fo the crashed server

Event Type: Error

Event Source: MRxSmb

Event Category: None

Event ID: 8003

Date: 11/20/2006

Time: 8:31:56 AM

User: N/A

Computer: HFHS-FS1

Description:

The master browser has received a server announcement from the computer HFGWL00099 that believes that it is the master browser for the domain on transport NetBT\_Tcpip\_{78ECB189-D1AE-409}. The master browser is stopping

or

an election is being forced.
