When you view the logged events in Event Viewer in the upper right corner, third button down is a copy to clipboard, then you can paste in the body of a reply message.

Please do so for each of the different System Log events (that are a Type: 'Error' or 'Warning') since last boot so we can see all of the event detail.

Re: Event ID 2019 and Event ID 333

5 days the server stops responding. When you try to log onto the server locally you get the following message: The application failed to initialize properly(0xc0000044). then you just get a gray screen...hitting ctrl alt del to open task manager just brings up the same error. In the event log there are the events in the subject appx every 15–20 seconds. A reboot fixes the server for about 4 days and then this happens again. It sounds like a memory leak but i cannot figure out what would be causing it. When the server is up i check the NP pool in the task manager and nothing seems to be using abnormal amounts of memory.
