hi,  
on my first SP1 install i was stuck in same situation, after i registered polstore.dll all work again, i dosen't said that is the solution but could be for IpSec in default blocked mode, for others errors will have to see after IpSec are not blocking the system connetivity.

Dear All:

thats not the error I get.

I install sp1 then bang  
nothing much works.  
look:

Event Type: Information

Re: SP1 install and win2k3 server 2003

0000: 00 00 00 00 01 00 54 00 .....T.  
0008: 00 00 00 00 c4 10 00 c0 ....Ä..Ä  
0010: 01 00 00 00 00 00 00 00 .....  
0018: 00 00 00 00 00 00 00 00 .....  
0020: 00 00 00 00 00 00 00 00 .....

after that, these services terminate because the endpoint mapper database entry could not be mapped for them:

task scheduler, ipsec, automatic updates, com+(hung on start), system event notification (dependency hung on start), network connections(hung), windows firewall/ICS(hung), and the ntp timeprovider can't get time because it can't make a dns lookup of my time server, (because DNS is not up, and neither is the DNS MANAGER)

So I reboot again.  
then I disable ipsec from starting and reboot again but still I am not a dc, even though I am the only dc.  
(because rpc STILL does not come up)

I do not know how to ask the question. I don't think your fix is the solution. what is the problem here and how do I fix it?

Thank you in advance  
James Long

"James W. Long" wrote:

Hi all:

I run Windows Server 2003 SP1 INSTALL then it breaks.

Re: SP1 install and win2k3 server 2003

errors:

-ipsec blocks me.  
-no ethernet connectoid in control panel->network anymore,  
but device manger says ethernet contoller present and is  
working

correctly.

the connectoid was there before the install and was fine.  
-the rpc server is unavailable. cannot fine the domain name,  
group policy processing is aborted.  
-DNS manager can't connect

then this guy tells me this:

hi,  
if you install the sp1 that was for deploy with SUS you have  
to regsvr32  
polstore.dll to start the ipsec in default mode not in blocked  
mode  
--

me:  
Did I "install the sp1 that was for deploy with SUS..."  
I do not know....???  
I got it off microsofts website the full sp1 install,  
as opposed to getting the download from windows update.

"regsvr32 polstore.dll" when do I do that???

Will it solve the problem ?

Thank you,

James W. Long
