Thanks for the helpful tips.

a) What do u mean by "more importantly, the information storage"

Well, the Exchange Database. I don't know Backup Assist, but it's Website seems to indicate that it can do this:

<http://www.backupassist.com/BackupAssist/features.html#exchange>
<http://www.backupassist.com/education/backupExchange.html>

Are you doing an Information Store backup using BackupAssist?

That's mighty important, because it's where all your Mails are stored.
