-

Here is the set up.

Right click on the folder – sharing and security – (sharing tab) – permissions, everyone has full control.

Security tab, I added my security group, select everything BUT Full control, select advanced button, highlight my group and select edit, everything checked except, full control, both deletes, take ownership and change permissions, select ok or apply, back at the groups screen I have an additional entry for my group that says MODIFY, the permissions for that are everything except Full control, delete subfolders and files, change or take ownership.

I have 2 entries for my sec group, one at modify and one at read, write. I have tried deleting all groups and starting over many times. I have not gotten the right combination of settings to be able to save but not delete or move any files, folders.

Thanks,

Look for a post tomorrow morning, I will go through step by step so that you can understand what I did and how I did it. You might be right that I overlooked a step somewhere, so let's regroup tomorrow?

I think you are not doing it correctly or I am misunderstanding. You go to the folders NTFS permissions. There you add your group and grant them Modify. Click on advance and select the group then click on Edit. there you deny the permissions that were applied on the previous window.

in the ntfs permissions the group already had modify adn then there is an entry under that with read, write and execute. BOth entried have denied permissions for delete etc. Still not working right.....(sigh)

Give the group modify then go to advance and edit the permissions there using "deny" option.

I can not
figure this

Re: folder permissions

out and can
not find
anyone who
can answer
so
here
I
am
asking for
some help.

I have a
folder on
my server
that will
contain
information
scanned
and
saved
– the
original
documents
will then be
shredded. I
have a
security
group
that
will have
access to
this folder. I
want them
to be able to
save the
documents
to the folder
but not to
move or
delete them.

I set up the
folder
permissions
for
everyone to
have full
control
under
sharing and
security,

Re: folder permissions

under
security I
have added
my group
and set
them
as
follows:
everything
except full
control,
under the
advanced I
edited
this
group to not
allow
delete,
move or
take
ownership
etc. By
playing
with
these
settings I
can either
get them to
save (and
consequently
delete)
or
not
delete (and
consequently
not save). I
can not get
the correct
settings
for
save but no
delete.

Can this be
done and
can
someone
tell me the
precise
steps I need
to

Re: folder permissions

do
this?

Thanks in
advance.
