I have set the file audit modify and delete and which event ID represent a user have modified or have deleted the file .I hope to kbow which user have modified and delete of the special fle

You have to also enable File (i.e., OBJECT Auditing) in the Local Security Policies or through a GPO.

Auditing of files and other objects requires TWO types of settings:

- 1) ACLs on the Files (like permissions but for auditing)
- 2) General enabling of the auditing

Both are required.
