Actually if i log onto another PC with this user it still is happening (another user logged onto his pc doesnt have this problem), also i logged this user out and renamed his profile folder locally and on the profiles share (roaming prof) and then logged him back in to his PC to give him a new profile. On the new/blank profile with the same user account i still get the errors inside rsop.msc... weird. What do i have to do to resolve this? It seems like its not machine specific, but shouldnt a new profile for the same user account fix it in that case?

Thanks for the help.

Error - Logon failure: unknown user name or bad password.

The error information from inside "user configuration" properties is the following:

Monday, September 17, 2007 8:24:49 AM

Group Policy Infrastructure failed due to the error listed below.  
Logon failure: unknown user name or bad password.

Note: Due to the GP Core failure, none of the other Group Policy components processed their policy. Consequently, status information

Re: folder redirection for 1 out of 70 users is not working... why  
for the other components is not available.

I suggest you try posting in microsoft.public.windows.group\_policy if you want more expert help with this. Frankly, if this user can log into another workstation with no problems, I'd just wipe and rebuild this box (ideally, you've got images you can use) rather than wasting a lot more time on it.

I am also getting event id#1030&1058 daily.

1030–Windows cannot query for the list of Group Policy objects. A message that describes the reason for this was previously logged by the policy engine. 1058–Windows cannot access the file gpt.ini for GPO

CN={3DA8E0C3–21DF–42B4–B14F–DA725B44D2FD},CN=Policies,CN=System,DC=kciinc,DC=

The file must be present at the location

<\\kciinc.net\SysVol\kciinc.net\Policies\{3DA8E0C3–21DF–42B4–B14F–DA725B44D2FD}\gpt.ini>

(Logon failure: unknown user name or bad password. ). Group Policy processing aborted.

I dont understand the bad username/password, the user logs in fine. Everything works great except this folder redirection. Exchange, sharepoint, log/logout, etc.

Thanks for the help

just did rsop.msc and when it comes up the  
"user configuration"  
bottom portion of the gpo has a red x on it,

In rsop.msc – click on <username on computername>onthe  
left

Click on User configuration on the right

Click Properties

Click Error Information

That should show you more info.

also a window pops up when you  
access the user portion of the gpo and says

Re: folder redirection for 1 out of 70 users is not working... why

there was a bad  
username/password on accessing the .adm  
files (admin template).

What's the exact text of the message?

however as stated earlier gpresult /z shows  
the setting as correctly  
set... shouldn't disjoining and readding to the  
domain have fixed  
this issue? seems like a trust issue between  
this workstation and  
the domain now... how to fix?

Not necessarily – what do you see in the event logs?

"tehtedg@xxxxxxxx" wrote:

Done gpupdate /force  
gpresult /z shows the policy  
is being set  
right click on my docs  
shows local c:\docs and  
settings folder as  
target with no option to  
redirect  
i disjoined and readded this  
pc to the domain with no  
luck  
installed uhcp  
deleted profile locally,  
logged back in as user  
(roaming profiles)  
i do have event id  
1517/1524 before i installed  
uhcp...

none of the above has  
solved the issue, any ideas.  
i will run rsop.msc to see  
what it returns, should be  
the same as  
gpresult /z though...

and  
user  
home  
directories.  
Inside  
our  
main  
gpo  
for  
all  
users  
i  
have  
configured  
folder  
redirection  
for  
my  
documents  
using  
the  
setting  
"redirect  
to  
user's  
home  
directory".  
This  
works  
great  
since  
the  
"u:"

Re: folder redirection for 1 out of 70 users is not working... why

drive  
on  
all  
profiles  
is  
now  
the  
same  
as  
the  
my  
documents  
location  
and  
therefore  
all  
my  
doc  
links  
(on  
desktop  
and  
in  
apps)  
goes  
to  
the  
same  
place.  
We

Re: folder redirection for 1 out of 70 users is not working... why

When  
you  
right  
click  
my  
documents  
on  
the  
desktop  
it  
says  
"c:\documents  
and  
settings\username\my  
docs"  
instead  
of  
the  
UNC  
path  
like  
everyone  
elses.  
The  
"u:"  
drive  
or  
home  
directory  
is  
still  
being  
mapped  
and  
is  
available,  
all  
files  
are  
there  
and  
work  
normally.  
No  
one  
else  
has  
reported  
this  
problem.  
HELP!!!

Re: folder redirection for 1 out of 70 users is not working... why

TG

Check the workstation's event logs, and run an rsop.msc to check for errors. Oh, and before anything, do a gpupdate /force.
