You need to set your share and your NTFS permissions  
so that the account that runs robocopy can do what it  
needs to do. You're in charge!

"Hugo" <[newschrg@xxxxxxxxxxxxxxxx](mailto:newschrg@xxxxxxxxxxxxxxxx)> wrote in message

Hi Pegasus !

Thank's for your reply !

It's true to say that it's not a robocopy problem... If I start robocopy when  
logged on with an account that has Local Admin rights on source and  
destination server (Domain Admin)... I have no problem !!! Why I have to  
give admin right on source server ???

For security reason, I don't want to give local admin on many servers !!!

Any other idea !

Hugo

Hi !

I use robocopy tool with the following parameters to synchronize a directory from one server to another one :

```
c:\batch\robocopy \\servername\backup$  
d:\data\servername\mssql /mir /copyall  
/mot:5 /ndl /nfl
```

I receive this message (for all files) :

```
2007/10/01 12:52:25 ERROR 1314  
(0x00000522) Copying NTFS Security to  
Destination Directory  
\\servername\backup$\BalanceProd\  
A required privilege is not held by the client.
```

The command is executed on the destination server. The user have admin rights on that server and full control rights through the share and NTFS on the source server !!

Any idea ?

Hugo

I don't think this is a robocopy problem. It sounds very much like a permissions problem. See if you can perform the individual

operations manually:

- Create the target directory
- Copy files to the target directory
- Overwrite files in the target directory
- Delete files from the target directory
