In article <[e48f7f98-dffc-4b1d-acee-1e316c071a9e@xx](mailto:e48f7f98-dffc-4b1d-acee-1e316c071a9e@xx)>, [markm75c@xxxxxxx](mailto:markm75c@xxxxxxx) says...

12 disks.. what sort of case do you have those in.. the one we have been buying is a 2u rack mount that holds 8 removable.. hence we really cant go beyond 8, unless i get something different.

IBM 3800, we also use Chenbro cases for white-box servers.

I never buy 2U servers unless I'm doing a web server that only needs a MIRROR.

How does all this change if i look to virtualize each role.. i'm leaning more towards virtualizing each role.

A database, unless you want to kill performance, needs a proper drive setup.
