I'm new to server migrations.....and need help..

I have new dell power edge 2950 that need to replace on old server. My question is what is the best way to transfer all the data: (active directory, DNS, sql express, dhcp, files and programs) settings and configuration from the old server to new?

I created a complete backup of the old server including system state. I tried to restore everything to the new one, but i'm getting errors.

thanks, i appreciate the help.
