Hi all,

Can any samaritan help. I try booting windows server 2003 with windows server 2008 RC1 and after reaching the boot.ini menu, the list of the OSs are displayed, when i select any one of them, the system will not continue booting and no error message is displayed. The boot order is: Server 2008 RC1 was first installed then followed by Server 2003. is it possible for me to boot both the two together? if it is; what is it that i ma missing?

Thanks in Advance.
