Hello Meinolf,

It's usually when I reboot the desktop will appear. But this strange behavior happened twice and I want to fix the problem.

Yes there is just a blue desktop and a mouse pointer. No reaction on Ctrl+Alt+Del or Ctrl+Shift+Esc.

Regards, Lex

Hello Lex,

What happens if you reboot the machine? What do you mean with the desktop doesn't show up? Just a blue or black window or what do you mean?

Best regards

Meinolf Weber

Hi,

One of my servers is acting strange: I am able to log on to the server but the desktop doesn't show up. When I connect to the server by RDP (not console) the desktop pops up and works just fine. RDP console gives the same error as the console.

The only message in the system log is Application Error, Category (100), Event 1000: Faulting application explorer.exe, version 6.0.3790.3959, faulting module kernel32.dll, version 5.2.3790.4062, fault address 0x0000bee7.

Re: Unable to get desktop on Server 2003

The server is running Windows Server 2003 SP2 and is up-to-date using WSUS.

Is there a solution to my problem?
