George <George@yahoo##.com> typed:

Hello,

Is it possible to allow all domain users access to all files and folders on a certain share, yet prevent users (except one) from create new folders and sub folders? O/S is Windows 2003.

Thank you,  
George

Yes. Simply share the folder with the following perms:

Share perms:

Authenticated Users = C  
Domain Admins = FC

NTFS perms:

Authenticated Users = R  
Group1Modify = M (that can perform what you are asking)  
Group2ReadOnly = R (that can't)

If you want Group2ReadOnly to be able to change files but not create sub folders, don't add them in the DACL (Discretionary Access Control List) because that is a standard set of combined permissions, but rather click on Advanced and add the group in the Advanced ACL (Access Control List) and select the group, click Edit to get in the ACEs (Access Control Entries), and specify specifically the perms you want to allow for this object, child objects, this object only, etc.
