Hello,

I have a similar issue and I would like to confirm if we need a CA server with Windows Server 2003 Enterprise Edition in order to duplicate a Web Server template.

Hi Ricky,

This article 555281 seems to no longer be available. Any article starting with 555 are not published by Microsoft employees as the disclaimer at the bottom mentions and have not been tested by Microsoft.

What are the steps you have taken to create and attempt to publish this certificate template?

Also, if this is a version 2 certificate template you are attempting to publish then it requires Windows 2003 Enterprise Edition or Datacenter Edition. If you are using Standard edition you will not be able to see the template to publish it. You can check in the Certificate Templates console to see what the Minimum Supported CA OS is.

Hope this helps,

Brian Delaney

Subject: Certificate New Template
Date: Wed, 11 Oct 2006 12:00:02 -0700

I'm following this instructions

<http://support.microsoft.com/kb/555281/en-us>

And the template I created from "L2TP/IPSec (Offline request) " is not appearing when I'm trying to add it "Certificate Template to Issue". It's not on the list.

Can somebody please advise?

Thanks,
Ricky
