Hello RaYlee,

Did you install the support tools to run setspn?
Then run in a command window:

```
setspn -a SPN domain.com\username
```

Where SPN is the servicename/computername (MESSENGER/SERVERNAME for example)

```
setspn -a MESSENGER/SERVERNAME domain.com\username
```

This will add the delegation tab to the useraccount you specified.

Best regards

Meinolf Weber

Hello Meinolf,

Thanks for your fast response. I really appreciate.

But I tried it many times in our office's windows 2003 server on
setspn
command, but always failed
to add one SPN.
Is the command executed on the 2003 server?

Do you have any experience on running this command?

Thanks,
Raymond

Re: "Account is trusted for delegation" is not shown

Hello RaYlee,

Depends on the functional level, if you set it from a client with an older adminpak on 2000 pro, you can still enable it. On the 2003 ADUC then you have an additional tab called DELEGATION on the user properties.

Or you can enable the DELEGATION tab yourself for the user if needed on

2003 ADUC:

<http://technet2.microsoft.com/windowsserver/en/library/bef202b0-c8e9-4999-9af7-f56b991a4fd41033.mspx?mfr=true>

If you cannot see the Delegation tab, do one or both of the following: Register a Service Principal Name (SPN) for the user account with the Setspn utility in the support tools on your CD. Delegation is only intended to be used by service accounts, which should have registered SPNs, as opposed to a regular user account which typically does not have SPNs.

Also see here:

<http://technet2.microsoft.com/windowsserver/en/library/dac7ecea-7c82-43c0-847b-3a1a81454cfe1033.mspx?mfr=true>

My god...I figured out what's happening.

It should be caused by raising functional level to windows 2003. I

found

that my testing PC at home is using

windows 2000 functional level. After I raise it to windows 2003, the

"Account is trusted for delegation"

disappear from the option list.

What should I do now?? As those installation guides require to set

this

Re: "Account is trusted for delegation" is not shown

option, if this disappear,
where I can proceed?
Please advice...
Raymond

Hi all,

This is the first time I post question
here...glad to have these
newsgroup for seeking help.

I encounter a problem in setting a property
for a domain account.

I need to enable an account option for a user
"Account is trusted
for
delegation" in the user's properties
under Active Directory, however, this option
is not available in
the
Active Directory Users and Computer
in office computer. When I back home and
turn on my testing PC, I
found
that this option is shown
on the form.

I really don't understand what is missing in
our office's windows
2003 server configuration?
Please kindly help.

Thanks in advance,
Raymond
