Thanks, the first one is going to be helpful. I searched the KB (and Googled) and didn't find that article. Must have been using the wrong search terms. Thanks again!

You might want to look at these:

<http://support.microsoft.com/kb/310430>

<http://technet2.microsoft.com/windowsserver/en/library/6c1aa83e-06fd-422c-b38f-a4a56032ce0a1033.mspx>

Hi,

We're looking to implement a logon banner for the usual legal reasons. Basically, anytime someone sits down at a corporate PC and hits CTRL-ALT-DEL to log on we want them to be presented with a dialogue box of legal text, and be forced to click on an OK button before they can input their username and password.

Important notes:

1. The text we've been provided with is 35 lines with 1561 characters including spaces.
2. We have a mix of Windows 2000 and Windows XP clients this will need to work on. The domain is a Windows Server 2003 domain in mixed mode.
3. We'd like the message to be easily updateable.

Re: logon banner

I seem to see a few different ways to go about this. Is this something that's accomplished by inputting the text in the domain security policy on a domain controller in the option: "Interactive Logon: Message Text for users attempting to log on"? That seems logical, but I'm not sure if that actually accomplished what I'm looking to accomplish.

Thanks in advance
