Hello Owen,

Maybe you can run a script with checks if a .exe is running in task manger to check and if not starting the .exe. But for this better post in scripting NG and also in XP. This is a server NG. And if it is so important why not creating a service that starts it automatically?

Best regards

Meinolf Weber

Is there any way to make a program auto restarted by Windows while not make the program as a service when the program terminates? I have XP machine.
