Hi Roger,

Thanks for posting!

Based on my research, the rename is supported for Windows alone but the Exchange will not work after that:

822590 Exchange System Attendant Does Not Start After You Rename a Windows  
<http://support.microsoft.com/?id=822590>

Under the cause section, you will find:

<Domain rename> operations are not supported when Exchange 2000 servers or Exchange 2003 servers reside in a Windows Server 2003 forest.

If you have any further question regarding the Exchange 2000/2003, please post to the following newsgroups:

microsoft.public.exchange2000.admin

microsoft.public.exchange.admin

Have a nice day!

Best Regards,

Jeff Qiu

microsoft.public.windows.server.migration: RE: Changing Netbios name

to change the NT netbios name. I have understand that domain rename will not support enviroment that has Exchange 2000/2003 deploy however I got to know from MSKB stated that is supported.

>*Can anyone advice whether changing NT Netbois name is support in Windows 2003 with Exchange deploy?*

>*Currently we are all our DC is windows 2003 and have a exchange 2003 running on a member server.*
