Thank you very much William for your assistance.

I hope that the following would be helpful.

I used ADMT for my migration from NT4 to W2K3. The domain source approved the domain target. Audit groups and the Registry were configured as indicated in:

<http://support.microsoft.com/?id=260871#3>

But when I migrated one user with his SID, an ID window opens and requests the user's password and the user's name of the source domain. When I input this information and click Next, I get the error message "the Authentication service is unknown (Error code=6d3)".

I hope this would help.

Many thanks.

Allen

Hi Allen,

In order to better assist you, I'd like to collect more information regarding this issue. Please let us know what the exact operations you performed with ADMT, what you did after you got "Logon failure" and when you received "The Authentication service is unknown". Also, please provide a detailed description of your environment.

There are several articles that address the "The Authentication service is unknown" error, you may want to refer to them to see if one applies:

243008 IIS 5.0 Does Not Start if Client for Microsoft Networks Is Uninstalled
