Hello,

Thanks for your posting here.

Would you please let me know how you migrate the shares? How did you get the error message?

I recommend that you backup and restore the share permissions by saving and restoring the following registry key:

[HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\lanmanserver\Shares]

You can also refer to the following document for the detailed information:

How to Restore Share Definitions To Another Server

<http://support.microsoft.com/?id=141589>

Have a nice day!

Regards,

Bob Qin

microsoft.public.windows.server.migration: RE: Errors and Warnings

I have tried to migrate several shares (user file space) from a Windows 2000 server to a Windows 2003 server and several warnings were given after the migration. There were two errors for each share that gave me a problem:

"Cannot enumerate open files on the share \\server\fileshare\$ System Error: 52, The network path was not found" and "Cannot read share information SHARE_INFO_2 \\server\fileshare\$ System Error: 53, The network path was not found"

It does appear that the share permissions are copied over (I have left that option checked), but the permissions under the Sharing tab (under the Permissions button) list only the Administrators when it should list everyone. Are the two related?
