Hi,

Thanks for replying.

May I describe your inquiry as following?

1. You want to migrate everything to the new domain and then change the domain name same as the old one with the NT 4 domain.

Yes this is possible.

2. What do you need to do while using the ADMT to migrate everything and then do a domain rename with the random.exe utility.

Since you do not want to use the upgrade, this is the only way for your to achieve the aim. Please use the random.exe to rename domain after migration.

Sincerely,

Carsyn Gu

| Thanks for your reply: Clarification- What I meant by unplugging is I
will
| not be utilizing the old boxes w/ NT 4.0 on them at all. I am getting
rid of
| them completely.
| But when I am gathering the info. from 4.0 via the ADMT tool I have the
new
| 2003 server on a different domain w/ trusts built.
| I am not doing an "upgrade" but rather a clean install of 200
