Hi Khimji,

Where are the others shares located, in the old domain or new win2k3 domain? How do you grant the permission to the "other shares", grant the permission to a group or individual users?

Technically speaking, if you grant a group, which has the user account, the permission to access the NT resource. After you migrate the user to the new domain, they are not part of the old group so that they lost the permission to access the old resource. If you are concerned about this, we can use the security translation wizard with a SID Mapping file to add the NewDomain\ "Domain Users" groups's SID to the resources. We also say it is migrate the NT local group.

For more details, please refer to the following link:  
How to Migrate Your Microsoft Windows NT 4.0 Directory Services to Microsoft Active Directory: Demo 3–Security Translation Wizard
