Hi Frank,

You want to know if you can just copy your specific login.bat file to the new Windows 2K3 server and it will work properly after migrating from Window NT4.0 to Windows 2K3.

Based on my experience, logon script migration is specific to how the logon script developed. For example, if you put "md c:\test" command in the script, this command is supported in both NT and win2k3. Therefore, the script contains "md c:\test" command can be successfully run in win2k3 server.

In other words, if the commands in your specific logon script are supported in win2k3 environment, you can simply and directly copy the original policy and assign it to be a logon script via GPO in win2k3 environment.

In the meantime, the Unix service for win2k3 is SFU, please refer to:  
<http://www.microsoft.com/windows/sfu/>

You can download sfu35new.doc from here:  
<http://www.microsoft.com/windows/sfu/productinfo/features/whatsnew.asp>

This paper provides an overview of the changes in Windows Services for UNIX 3.5 from earlier versions, including the fully integrated Interix technology of Windows Services for UNIX 3.5.

Included in This Document:

- " Introduction
- " New Windows Services for UNIX 3.5 Features
- " Network File System (NFS) Support
- " Server for NIS and Password Sync
- " Telnet
- " Interix
- " Summary
- " Related Links

Meanwhile, our private partner newsgroup is focused on break fix issues. If you need to be further assistance or have any other concerns regarding this issue, it is recommended that you contact Microsoft Customer Support

RE: NFS on w2k3 server question

Services (CSS) via telephone so that a dedicated Support Professional can assist you. Please be advised that contacting phone support will be a charged call.

To obtain the phone numbers for specific technology request please take a look at the web site listed below.

<http://support.microsoft.com/default.aspx?scid=fh;EN-US;PHONENUMBERS>

If you are outside the US please see <http://support.microsoft.com> for regional support phone numbers.

Thanks for understanding.

Thanks & Regards

Amanda Wang [MSFT]
