Hi Patrik,

Thanks for posting!

Based on the description, to make me clear, please help me know the following information on your side.

1. If the GPO what you mentioned is "password must meet complexity requirements" in Windows 2003 DC?
2. How did you "changing those settings" but it does not change the effective policy in the test domain?
3. Do you specific that you notice "User should change the password at the next logon" option checked after the user migration? If so, it is a feather by design, we cannot change them through GPO and we may use vbsript to uncheck them.

If there is anything that is unclear, please feel free to let me know.

Thanks & Regards,

Jason Tan

| I understand the GPO and the settings that need to be made to support non  
| complex passwords, however changing those settings in our test system  
| does  
| not change the effective policy in the test domain. What am I missing?  
|

| Thanks  
|
