Hello,

Thanks for posting!

Based on my research, Gateway Service for NetWare is included in Windows 2000 Server. It is not included in the Windows Server 2003. Regarding your question, Gateway Services for Netware are no longer supported on Windows Server 2003.

Windows Server 2003 continues to provide Novell Netware interoperability by means of Client Services for Netware (Microsoft's Netware client) and an IPX protocol driver. However, the Gateway Services for Netware feature (as found on Windows Server 2000) is not available on Windows Server 2003.

Netware servers are pretty much in the legacy class. Sites that require a Netware gateway function should maintain one or more existing Windows 2000 Servers to run the Gateway Services for Netware.

Novell NetWare integration overview

The Microsoft Windows Server 2003 family and Microsoft/Windows/XP provide several services that enable computers running Windows to coexist and interoperate with Novell NetWare networks and servers. Some of these services are included with the Windows Server 2003 family and Windows XP. Other services are available as separate products.

NWLink IPX/SPX/NetBIOS Compatible Transport Protocol (NWLink)

Included with both Windows Server 2003 family operating systems and Windows XP, NWLink is the Windows implementation of the IPX/SPX protocol. NWLink supports connectivity between computers running Windows and computers running NetWare and compatible systems. You can also use NWLink as a protocol that connects Windows-based computers and computers running MS Client for DOS. For more information about NWLink, see The NWLink IPX/SPX/NetBIOS Compatible Transport Protocol (NWLink).

Client Service for NetWare

RE: GSNW for folder access. Netware 5 and 6 and Windows Server 2003

Included with the Windows Server 2003 family and Windows XP, Client Service for NetWare makes direct connections from workstations to file and printer resources on NetWare servers. With Client Service for NetWare, you can access servers running either Novell Directory Services (NDS) or bindery security. Logon script support is also included.

Microsoft Directory Synchronization Services

Included with Services for NetWare (a separate product), Microsoft Directory Synchronization Services (MSDSS) can perform a one-time migration of directory objects or synchronize directory objects from both Novell Directory Services (NDS) and Bindery environments with Microsoft Active Directory.

Important

The IPX/SPX protocol is not available on Windows XP 64-Bit Edition and the 64-bit versions of the Windows Server 2003 family. Due to its dependency on the IPX/SPX protocol, Client Service for NetWare is not available on Windows XP 64-Bit Edition and the 64-bit versions of the Windows Server 2003 family.

Computers running operating systems in the Windows Server 2003 family cannot be IPX routers.

Hope the information helps. If there is anything that is unclear, please feel free to let me know.

Thanks & Regards,

Jason Tan

| I have a new Win2003 server and, like Windows 2000, i wanna install GSNW,
| click on GateWay button and to configure folders on Novell to be accessed
by

| Windows-Only users.

| IÂ´ve installed GSNW on Windows 2003, but the Button Gateway does not
exist

| anymore...

| How can i have the Gateway services for netware on Windows Server 2003?
|
