Hi Melcy,

Since you now can join XP to domain, the current problem is that you are unable to use domain use account to logon to the domain on this problematic machine; therefore, you should enable security log on the DC to gather the security log. Therefore, it does not mind that the XP mpsreport cannot be uploaded, please gather the info below for analyzing:

1. Write down error message exactly when use domain account to logon to the domain on the XP machine.
2. Open Event viewer on the DC, save the security log and send it to me.
3. On XP client, please save system log, application and security logs and send them to me.
4. On XP client, please issue the command "ipconfig /all > c:\test.txt", send me the test.txt

I look forward to your reply.

Best regards,

Rebecca Chen
