Hi Melcy,

>From the DNS output, unfortunately, the DNS cannot resolve the DC name, which indicated the DNS server is incorrectly installed or configured. A correctly installed or configured DNS server should resolve the DC name for this domain.

The Event 5723 indicates that indicates that the computer referred to in the message has not joined the domain properly or the account is corrupted.

Please refer to the following article to troubleshooting this issue:

<http://www.eventid.net/display.asp?eventid=5723&eventno=106&source=NETLOGONphase=1>

In addition, since DNS seems to be installed incorrectly, please contact Microsoft Support Professional who can help you resolve your issue in a more efficient manner instead of in this newsgroup.

Please be advised that contacting phone support will be a charged call.

To obtain the phone numbers for a specific technology request please take a look at the web site listed below.

<http://support.microsoft.com/default.aspx?scid=fh:EN-US:PHONENUMBERS>

If you are outside the US please see

<http://support.microsoft.com> for regional support phone numbers.

You may also post to windows.server.dns newsgroup to get more information about this issue.

HTH!

Best regards,
