Hi,

I will appreciate if you describe this issue in detail with any example.

Thanks.

Best regards,

Vincent Xu

Hi,

Perhaps my question was not clear : I want to know which impacts there is when i switch to native mode.
I'm worry about applications, but I think that there is no link between native mode and application authentication.

Thanks.

Hi,

So far I didn't hear any potential issue associated with you scenario.

Thanks.

Hi,

I have questions about
switching my domains to
native mode.
I have several domains in
mixed mode, and i want to
switch them to

native

mode. I know that i can
have problems ik i keep off
"Anonymous logon"

and

"Everyone" from the
"Pre-windows 2000
compatible access". I do not

want

to

change this for the moment
because i must finish the
applications
compatibility tests before.
So I want to know the risk
to switch to native mode : is
there any
potentially problems with
applications access ? the
risks concerns

only

applications which run on
my DC's ?
I have no more NT4 BDC
and all my DC's are W2K3.
I have still NT4 Members.

Thanks in advance.
