Hi Soren,

You need to join the Windows XP client into domain manually.

Regarding the user profile. local user account and domain user account are totally two different user profiles

You can refer to following article:

<<http://www.microsoft.com/windowsserver2003/techinfo/overview/sfnmig.msp>>

Hope it helps.

Best regards,

Vincent Xu

We want's to migrate from Novell 6.0 to Windows 2003. My question is how

do

you automate the client migration – Removal of the Novell Client, Join windows xp sp2 to the domain and what will happen to the eksisting local profiles when XP is joined to the domain.
