Hi,

Yes, it may be related. I'd like to suggest you check the DNS settings about the dynamic update:

816592 How to configure DNS dynamic updates in Windows Server 2003  
<http://support.microsoft.com/default.aspx?scid=kb;EN-US:816592>

Hope this helps.

Best regards,

Vincent Xu

Hi

Thanks for the followup; all the machines that i have migrated people

have

been logging into AD domain and working on them . Few of them are getting  
this error message and for them yes if an administrator logs in and

clears up

the log then the user can log in the AD or old NT domain.

yes the old nt4.0 domain is there and full two way trust is there between  
the new AD domain and NT4 domain. We are in the middle now half users

and

computers have been migrated and half more to go.  
Also i have one more questiong which might be related to this. That all

the

machines i migrated shouldnt there be a dns A record showing up in the AD  
zone i dont see any. the machines are pointing to the AD Dns.

Thanks  
Neil

RE: Computer Migration – Security log full Error

"Vincent Xu [MSFT]" wrote:

Hi,

I have following questions:

1. Now, can you logon to the new domain with all computers which are migrated? As you said "And it only allows them in if an administrator

first

logs in clear the log and then they log in", do you mean, other user account can log in only after a domain admin logged in and cleared the

log?

2. Is the old NT4 PDC still available?

3. These audit log is on the Windows XP side?

check following article:

831905 Event ID 577 appears repeatedly in the security event log of

your

Windows XP-based computer

<http://support.microsoft.com/default.aspx?scid=kb:EN-US:831905>

my suggestion is: Try to remove the computer out of domain and clear

the

computer account .Then re-join into domain to see if helps.

Thanks

Hello Everybody

I have got a problem with  
some of the xp machines i  
am migrating from

nt4.0

domain to a 2003 domain. I  
have had huge sucess with  
most of them but

some

have this problem of  
security log full error  
coming up when the

client is

trying to log in . And it only  
allows them in if an  
administrator

first

logs

in clear the log and then  
they log in. Next day its the  
same thing. I

RE: Computer Migration – Security log full Error

can't

figure out whats going on.  
Any clues. Here is some of  
the security

log

event

that i copied . see if  
somebody can pick up the  
clues. One thing i

noticed in

the security log that it has  
primary domain as still the  
old nt4.0

domain

even though the machine  
has been migrated.
