Hi,

First, which authentication method did you use? Windows Authentication or Mixed authentication? Basically if you enabled SID history feature in AD, the users are still able to log in with old sid. If you want to remove sid history, check following steps:

- 1) Stopped all SQL Related Services and modified the startup mode to manual.
- 2) Migrated SQL Server to new domain.
- 3) Modified the startup account for SQL.
- 4) Started SQL Server.
- 5) Generate output of sp\_help\_revlogin stored procedure.
- 6) Generated Permission script.
- 7) Detached all the user Database.
- 8) Dropped all the logins.
- 9) Used the permission script to recreate logins and add server level roles
- 10) Attached the user database.
- 11) Mapped the SIDS using sp\_sidmap procedure.

SAMPLE: Mapsids.exe Helps Map SIDs Between User and Master Databases When Database Is Moved

<http://support.microsoft.com/?id=298897>

Hope this helps.

Best regards,

Vincent Xu

I am sorry, forgot to mention in last post that the member server run SQL server and application which in a NT domain, how to migrate it to windows

2k3

domain without affect users to access.

Thank you,
