Hi,

Performed some research: Try to change the object input file to contain the target samaccount name with "\$" to see if it works.

Object input file:

sourceName,targetRDN,targetsam,targetUPN  
svc-3\$,,rensvc3\$

Thanks.

Best regards,

Vincent Xu

microsoft.public.windows.server.migration:24207

X-Tomcat-NG: microsoft.public.windows.server.migration

I have isolated my problem. It is the use of an include file that

specifies

a computer name change. If I only specify the source name, i have no problems. If i use the insert file and specify TARGETSAM or TARGETRDN, it gives the error.:

2006-06-21 23:14:53 Changed computer name to MIG\_PC01

2006-06-21 23:14:55 ERR3:7075 Failed to change domain affiliation, hr=800706fb The security database on the server does not have a

computer

account for this workstation trust relationship.

2006-06-21 23:14:55 Changed computer name to PC01

I used the insert format as described in the ADMT v3 documentation, which isnt very descriptive for computer renames.

This is the only piece i can't figure out....your assistance is

appreciated.

Re: ADMT v3 Computer Mig error

Re: ADMT v3 Computer Mig error

IBy the way, I am ignoring the reg and sid errors since they are not

that

important. To answer your questions:

1. – The machine was on and in a logged off state. No reboot occurred and

the

computer name was reverted to the original name as per the log

2. This is a reg key problem....SID translated just fine for all other functions.

3. DNS is fine....pointing client to target DNS , which forwards to

source

DNS

[news:2gWYwoplGHA.4948@xxxxxxxxxxxxxxxxxxxxxxxxxxxx](mailto:news:2gWYwoplGHA.4948@xxxxxxxxxxxxxxxxxxxxxxxxxxxx)

Hi,

Here are some problems in the log file:

1.

```
***** Start of Post-check Summary *****
Machine Name Status Message
PC01.SOURCE.COM Not Started
***** End of Post-check Summary *****
```

Did the PC01 start when you perform machine migration?

```
2. WRN1:7644 Unable to translate Microsoft Installer
related registry keys from
'S-X-X-XX-XXXXXX-XXXXXXXXXX-XXXXXXXXXX-XXX'
to
'S-X-X-XX-XXXXXX-XXXXXXXXXX-XXXXXXXXXX-XXX'
```

I attached a sid2name tool, please verify the first  
"S-X-X-XX-XXXXXX-XXXXXXXXXX-XXXXXXXXXX-XXX"  
can be resolved to friendly  
user

Re: ADMT v3 Computer Mig error

name in source domain. Also check if you have migrated this user account before.

3. Check the DNS settings. Check if you can ping FQDN of source DC in target DC

Best regards,
