Hi Vincent

When I open a command window & type ping venus the replies I get are from ip address 213.52.175.43 which is not from any machine on my network.

So I was wondering if my DNS was setup correctly?

At the moment on the DNS settings of the network card of the server I have the internal DNS server ip address 1st & then the address of the external (my isp) DNS servers

Cheers

Hi,

"Why when i ping a computer name does it look on the internet first"

Would you please describe in detail? Some ping examples would be appreciated.

Thanks.

Best regards,

I have just upgraded a bdc to server 2003. I have still got 2  
bdc's on

the

network running nt4 server. Then I introduced to server 2003  
servers put

AD on

RE: DNS

one of them and switched off the original upgraded server  
2003 (it was

very

nearly out of disk space!).

I am running wins which is currently on one of the BDC's  
and I have put

that

ip address in the network setup of the server 2003 servers.

In the network setup of the server 2003 servers I list the local  
dns ip  
address first and my isp dns ip address second.

Why when i ping a computer name does it look on the  
internet first?
