Thanks Vincent for your assistance. The problem is now resolved. A

support

engineer from Microsoft assisted by connecting to our server remotely and

did

fair amount of cleaning up.

I will close this case now.

Thank you

Hi,

Sorry for not helped. However, I think it is good choice to
open an
incident with MS.

Hope the problem being resolved soon.

The current POA I have is to rebuild the server afresh. So far i have

managed

to export user information (not complete information) using ldifde.

However

this will just save me the time of creating all the users in the new

Re: Win2K to Win2003

server.

There is a process involved
in getting all the shares....a
long

winding

process.

I have now raised a support
ticket with Microsoft to
resolve the

issue –

I

hope this can be resolved
without rebuilding the
server as that means
disturbing so many users
and removing and joining
them back to a new

domain –

PLEASE HELP.
