Thanks Vincent. Subinacl would be fine but not sure how I would automate it to set the perms on the files to the perms of the parent directory. Sounds risky on over 2.5TB of data and approx 7million files to repermission. I had a call open with Microsoft who were looking at a modified XCACLS script to reset the inheritance flag to fix this problem. I still have not heard back from them. Instead I used Robocopy to re-copy the data but with permissions only using the /copy:s switch. This just copied permissions (no data) so was quick, and this seemed to work well.

Thanks for replying.

Hi Mark,

Check following link:

<<http://www.microsoft.com/downloads/details.aspx?FamilyID=e8ba3e56-d8fe-4a91-93cf-ed6985e3927b&displaylang=en>>

Hope this helps.

Best regards,

Vincent Xu
