Hello,

I'm working on migrating 3 W2k3 domains into 1 w2k3 domain. Target domain password policy is currently set to default – when migrating users, the passwords are migrated but the users are forced to change their password on first logon – the client doesn't want to force the passwords to do this. Is there a way to command line ADMT 3 to do this? I'm looking at the command line parameters and I don't see any option like this. Complex passwords are enforced on the source, but not the target. (yet)

Thanks

–Joe Hanning

I have never found a way to do this using admtv3. My solution was to

Thanks KJ, I'll just script something out using dsquery for each batch of users then

–Joe

Admod works very well too depending upon your grouping of migrated users, and I think Richard Mueller just recently posted a nice script.
