Dear Matteo,

Thanks for posting here.

Based on the error message included in your post, I suspect this issue may be caused by inappropriate delegation. After further research, I notice this problem occurs if the {SOURCEDOMAIN}\$\$\$ group on the source domain was created as a global group instead of as a local group when migrating user accounts from a Windows NT 4.0 domain to a Windows Server domain. Please verify this and let me know the result. Thanks.

For more information about "Could not verify auditing and TcipClientSupport on domains. Will not be able to migrate Sid's. Access is Denied", please refer to the below article:

ADMT: "Could Not Verify Auditing and TcipClientSupport on Domains" Error Message When You Try to Migrate User Accounts
<http://support.microsoft.com/kb/317846/en-us>

In addition, we can verify the domain trust by "nltest" command. Please view the following information about "nltest", please refer to:

<http://support.microsoft.com/kb/158148>

The below article provided you some examples about to verify the trust statue between two domain,

Nltest Examples

<http://technet2.microsoft.com/windowsserver/en/library/c199734f-1d36-439b-94e1-449568d79d411033.aspx?mfr=true>

As for " I aim to migrate groups, users and computers to allow to the workstations to new domain and do nothing more on the single machines in the company, am I on the right path?", we recommend the migrate sequence should be Domain Global Group->Domain Local Group->User Account->Computer Account.

I hope this helps. If anything is unclear, please feel free to let me know.

RE: Migrate NT 4 domain to 2003 server R2 x64 with ADMT v.3

Have a good day!

Sincerely
Morgan Che

--->
--->Good morning everyone.
--->
--->The scenario is:
--->Migration from Windows NT4sp6 with 50 users (1 pdc)
--->to Windows server 2003 R2 x64
--->I downloaded ADMT v3 from microsoft website to perform the task and
--->following ADMT v3 migration guide (V3MigGuide.doc).
--->

RE: Migrate NT 4 domain to 2003 server R2 x64 with ADMT v.3

RE: Migrate NT 4 domain to 2003 server R2 x64 with ADMT v.3

--->I red previous posts about this matter but I need some more informations.
--->
--->I did all steps reported in the guide, when I reach:
--->"Initializing ADMT:
--->Initialize ADMT by running a test migration of a global group, and select
--->the option named Migrate Group SIDs to target domain..."
--->
--->and try to migrate the first group (I choose one global group from source
--->nt4 domain) I receive the message:
--->"Could not verify auditing and TcpipClientSupport on domains. Will not be
--->able to migrate Sid's. Access is Denied."
--->I found on microsoft kb: "This error typically indicates that the user
--->account that is used to run ADMT does not have enough permissions to perform
--->the migration in one or both of the domains."
--->Despite of this message I find the group in the OU I selected as target and
--->the ADMT final reports no error.
--->
--->I'm running ADMB on the target 2003 domain logged as administrator and two
--->way trust between the domain is established (how can I verify the trust?).
--->
--->I aim to migrate groups, users and computers to allow to the workstations to
--->new domain and do nothing more on the single machines in the company, am I
--->on the right path?
--->
--->Thank you, hope to give you enough information.
--->Matteo
