Hello everyone....

I have a server with a single NIC, and the NIC has multiple IP Address assigned. (172.22.123.10, 172.22.123.11, 172.22.123.12, and 172.22.123.13)

When the computer makes requests to a specific IP address (ie: 10.2.0.123), I want it to make the request using 172.22.123.13, but I want to use 172.22.123.10 for everything else.

Does anyone know how I can accomplish this?

Thanks,

Forch

Thanks,

Mark
