Hi Daljit,

Why do you use PCAnywhere? Why don't you just provide Terminal Services for everyone? It is secure enough since it uses 128 bit encryption (just as much as I use for my on-line banking) by default and you can even raise it up to 140 bit.

You can also use TS to connect to console just like you would with PCAnywhere...

I also use a software that replaces msgina.dll and with that disables TS. What works for me is this. Open regedit and drill down

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon

Here look for REG_SZ that is called GinaDLL and the value will probably be "awgina.dll" Double click on this REG_SZ and edit "awgina.dll" to "msgina.dll". Close Regedit and try again...

I hope this helps,

Mike
