"You do not have access to logon to this Session"

Symptoms: When trying to connect to a W2K server running Terminal Services with the Remote Administration, you may receive "You do not have access to logon to this Session" message.

Resolutions: this issue occurs because W2K server running Terminal Services with the Remote Administration mode do not permit users to logon by the default. Only two concurrent administrator accounts for server management can connect to a W2K domain controller running Terminal Services configured to use Remote Administration mode.
