are you running xp with sp2? this may help. quoted from

<http://www.howtonetworking.com/wineventid.htm>

Event ID 3019 – The redirector failed to determine the connection type.

Event ID 3034 – The redirector was unable to initialize security context or query context attributes.

Cause: This update helps resolve an issue on computers running Windows XP Service Pack 2. Programs that connect to IP addresses in the loopback address range may not work as expected and you may receive an error message indicating you cannot establish a connection.

Resolution: download WindowsXP-KB884020-x86-enu.exe
