

Unable to map network drive.

Unable to map network drive.

I'm using Windows Server 2003 and am unable to map a network drive after setting up the shared folders.

I have some shared folders setup properly and they show hands underneath, the shared folders do not show up when I browse for folder to map drive after right clicking "My Computer" and clicking "Map Network Drive" then click the "Browse" button, the picture below shows what I mean:

<http://knight-technologies.us/cannotmapnetworkdrive.jpg>

Under Knight-tech2 it should show Drives X, Y, and Z, but it doesn't.

What do I need to do?
