bring one heap of money and buy sniffer pro. but it is a very expensive solution for just this purpose. I do not know any other tool that does this specific trick.

good luck,

Eric Denekamp

Hello,
I need to log the bandwidth usage between 2 server:
- using Performance Counter or WMI I can get the Ethernet Card Bandwidth
but I'm unable to filter the traffic between 2 IP
- Using Network Monitor I can filter the traffic between 2 IP but I'm unable to log the usage in order to calculate min/max/medium values.
Any suggestions ?
Thanks
Vittorio Pavesi
