Hello,

As the Whitepaper indicates, in order to get PMC working, you will have to have permissions for Administrator of remote computer. If you are not, you will see mixed behaviours. If you are in domain environment, you can add your account to the Domain Admins; if you are not, you have to set the password of local Administrator to the same with remote Print Server, then use Administrator to logon and manager the remote Print Server.

I tested in a Windows Vista and Windows XP SP2 as a Printer Server, that is work fine.
