Graham Webber <asl@xxxxxxxxxxxxxxxx> typed:

We are having a problem with windows Vista Business and Windows server 2003 RS since installing service pack 2.

Browsing network shares and opening files has slowed down to a point it is almost unusable, I have searched everywhere for a fix but cannot find one. I have noticed a few posts from other people describing the issue but they have resolved the issue by un-installing SP2.

<snipped>

In addition to Ken's post, which explains why it is happening, take a look at this quick fix shortcut.

Windows 2003 service pack 2 known issues on Small Business Server 2003

Susan Bradley: Vista slow after SP2 installed?
<http://msmvps.com/blogs/bradley/archive/2007/04/04/vista-slow-after-sp2-installed.aspx>

Try the following before un-joining it from the domain:

```
netsh interface tcp set global rss=disabled
netsh interface tcp set global autotuninglevel=disabled
```

Reboot the machine. Then re-join. Reboot.

Instead of the website you're using, try using OEx (Outlook Express or any other newsreader), and configure a news account, pointing to news.microsoft.com. Anonymous access. It's free – no username or password required nor do you need a Newsgroup Usenet account with your ISP. It connects directly to the Microsoft Public Newsgroups. OEx allows you to easily find, track threads, cross-post, sort by date, poster's name, watched threads or subject. It's easy:

How to Configure OEx for Internet News
